

Visual Service Centre

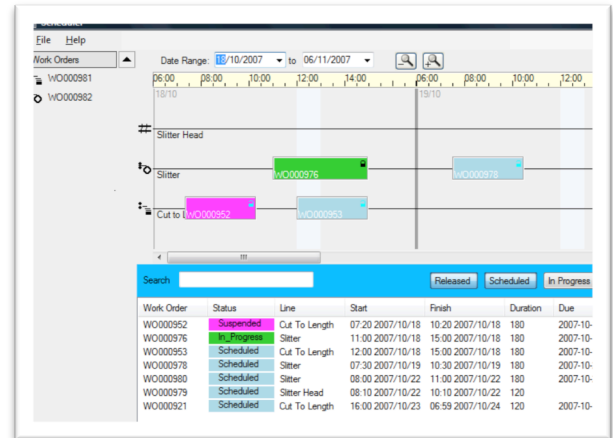

Making it easy for your customers to do business with you

VSC is a paperless real time information management and decision-making tool developed for steel and aluminium service centres.

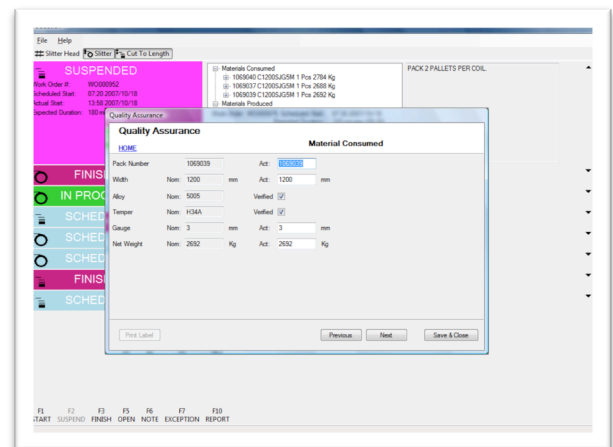

- Works orders are scheduled in real time (while the customer is on the phone) and displayed on the shop floor. Last minute changes are displayed to operators
- Sales staff has access to machine loadings and the status of current orders via a visual display.
- Interfaces direct to line controllers downloading Length and Quantity
- Production Activity Monitor option for line utilisation in real time without operator input.

Other system features include:

- Interfaces to Sales order entry, Stock control and Accounts.
- QA is all computer based reducing data storage and retrieval costs.
- Traceability is provided from coil receipt to dispatched pack.
- Interfaces to Slitter Head setup software.
- Can be used with automated and manual work centers.
- Feed coils are validated by barcode prior to running.
- Feed coils are validated by barcode prior to running.
- Built using open software development tools (.Net, MS SQL).

Increases your number of orders, throughput and your ability to make and keep promises.

APC Integration has over 10 years experience in developing manufacturing order execution systems.
